

# Look Who's Energizing the Community

By developing a landfill gas energy project,  
Miron Construction is:

- 🔥 Reducing greenhouse gas emissions
- 🔥 Improving local air quality
- 🔥 Encouraging economic development and job creation
- 🔥 Developing a local, renewable source of energy

The U.S. Environmental Protection Agency congratulates Miron Construction, Wisconsin Public Service, and Town of Ledgeview as well as LMOP Partners Brown County Port & Solid Waste Department, Cornerstone Environmental Group, Foth, and Wisconsin Department of Natural Resources for their efforts to improve the community and the environment by utilizing landfill gas to create energy. Brown County worked cooperatively with Cornerstone Environmental to develop a project that captures landfill gas from the Brown County East Landfill in Ledgeview, Wisconsin, to fuel two 925-kilowatt 3516 A+ generators manufactured by LMOP Partner Caterpillar. The 1.85 megawatts of green power generated is purchased by Wisconsin Public Service. Using landfill gas for energy helps the environment by reducing fossil fuel emissions, helps the economy by providing a stable source of alternative energy, and benefits the community by improving local air quality. The annual reduction of greenhouse gases attributable to this project is approximately the same as the annual greenhouse gas emissions from 1,600 passenger vehicles, the carbon dioxide emissions from more than 20,000 barrels of oil consumed, or the carbon sequestered annually by 2,000 acres of pine or fir forests.

For more information on the benefits of landfill gas energy, contact the Landfill Methane Outreach Program at [www.epa.gov/lmop](http://www.epa.gov/lmop).
